Allowable Subject Matter

1. claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance: the closest prior art of Roman (U.S. Pub. No. 2002/0196848 A1) provides for a method of distinguishing between regions of an image, separating and masking the original image into multiple image planes, and compressing each separated image plane with a compression method that is optimal for its characteristics. From a video stream, and separate image streams can be stored or transmitted at different rates. Alternatively, frame differencing can be applied to the separated streams (paragraph 28). **However the prior art of Roman failed to teach or suggest for receiving a source image; receiving an image quality mask corresponding to the source image, wherein the image quality mask contains regional image quality levels specifying the degree to which information in corresponding regions of the source image can be lost when generating the compressed image; and generating the compressed image by compressing the source image using a dictionary based lossy compression algorithm that regionally varies the amount of information loss from the source image based on the regional image quality levels contained in the image quality mask.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
